

## INTRODUCTION

The default size and position of the EnSight user interface windows was chosen to try to minimize window overlap. Since some users may have different criteria for window placement, EnSight provides a method for saving this information.

## BASIC OPERATION

You can move and resize windows using the standard window manager operations. Once you have positioned your windows as desired:

### 1. Select **Prefs > Save Window Positions...**

The information is saved in your `.ensight6/` directory (which is located in your home directory) in the file `ensight.winpos.default`.
